

Environmental Vulnerability Index 2004

Index Description:

The Environmental Vulnerability Index (EVI) is a unitless index score ranging from 174 (for low vulnerability) to 450 (for high vulnerability). The EVI has been designed to reflect the extent to which the natural environment of a country is prone to damage and degradation.

The EVI is based on 50 indicators for estimating the vulnerability of the environment of a country to future shocks.
