

Air Pollution (Effects on Ecosystems) Policy Category Scores (2008 EPI)

Robinson Projection

Air Pollution Policy Scores (ecosystems)

Index Description:

The Air Pollution (Effects on Ecosystems) Policy Category of the Ecosystem Vitality Objective from the 2008 EPI is a unitless score based on a theoretical range from 0 to 100 (0 represents the farthest from the target and 100 represents the attainment of the target). Scores are averaged across two constituent indicators: Regional ozone and Sulfur dioxide emissions. This policy category weight is 2.5% of the overall EPI.
