

# Environmental Health Objective Scores (2008 EPI)

Robinson Projection

## Environmental Health Obj. Scores

## Index Description:

The Environmental Health Objective portion from the 2008 EPI is a unitless score based on a theoretical range from 0 to 100. (0 represents the farthest from the target and 100 represents the attainment of the target.) Scores are a weighted average across three constituent sub-categories: Environmental burden of disease, Water (effects on humans) and Air Pollution (effects on humans). Missing data in some countries were imputed by exploiting the high correlation between GDP per capita and health measures. This objective weight is 50% of the overall EPI.
